

How to use windows media player to transfer your music and video to your MP4 player

Note: We assume that all your videos and music are converted properly to suit your individual MP4 player's format before using windows media player transfer function, otherwise your MP4 player may report file errors or non support file type. Different models of MP4 players may require the different format of music and videos types. It is user's responsibility to find out and get the proper format videos and mp3 music, please do not ask us for free software for legal copyright purpose.

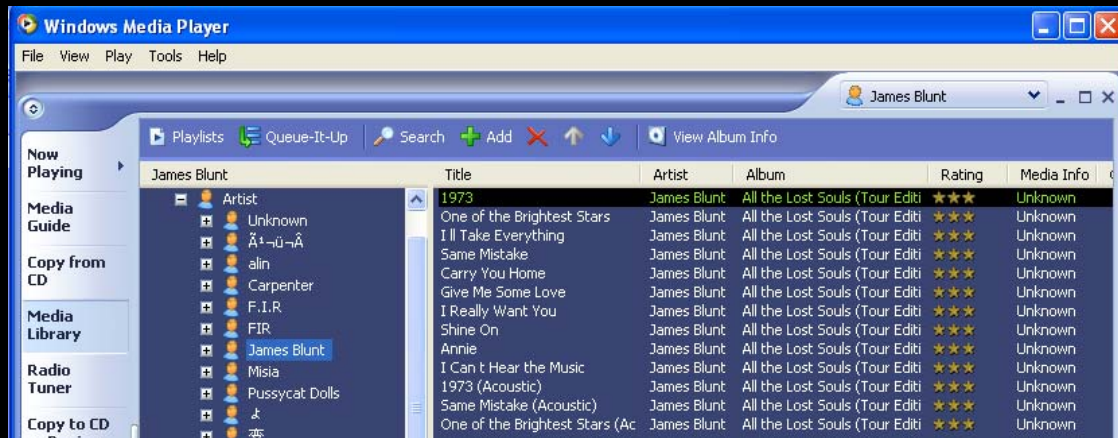

1. Open the windows media player (this demo windows player is version 9.0 , your version maybe newer than this, and may be slightly different)

2. Go to click the tab " Media library" on the side bar of WMP

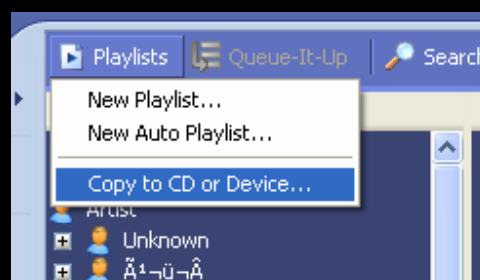

3. Once you click the <Media library> tab, the windows media player will search all types of videos and music sources in your hard drives , and sort out the music, videos that available in your hard drive

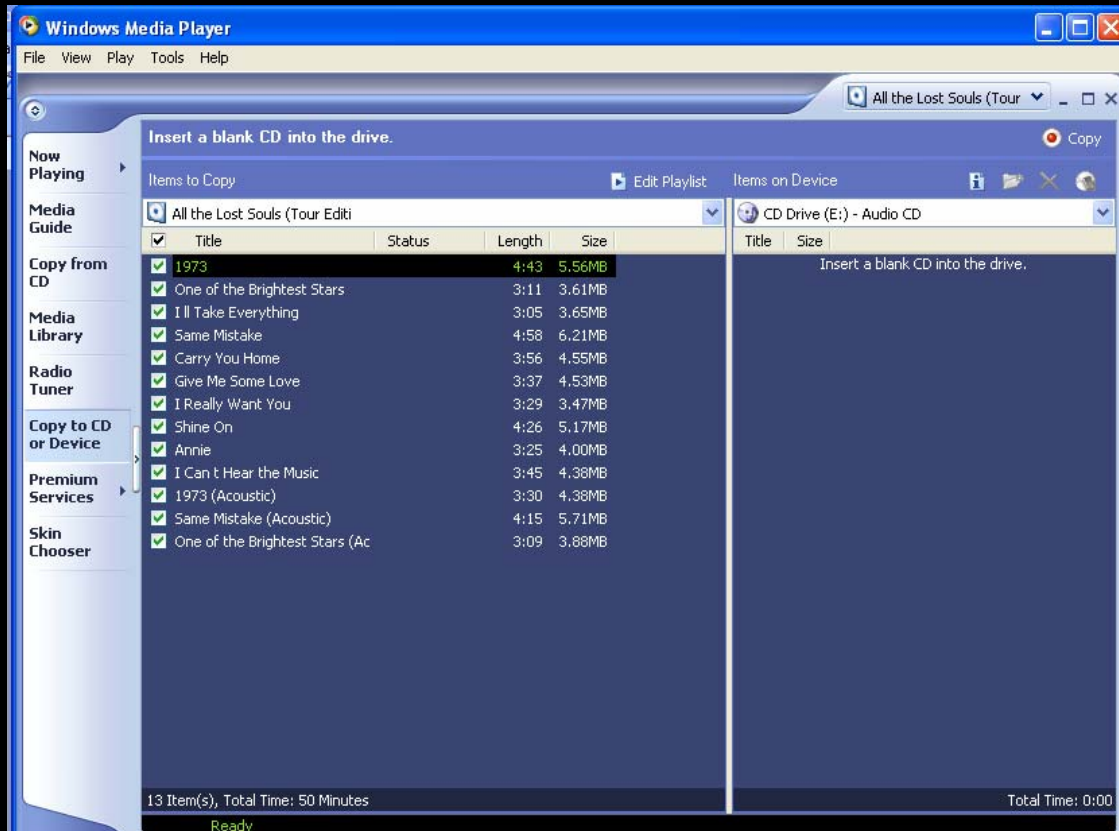

4. Connect your mp4 player to your computer through the USB connection
5. Once you make sure that the MP4 player is connected, select the album or music that you want to copy into the MP4 player. eg. "James blunt" folder
6. Then move your mouse cursor to the <Playlists> button

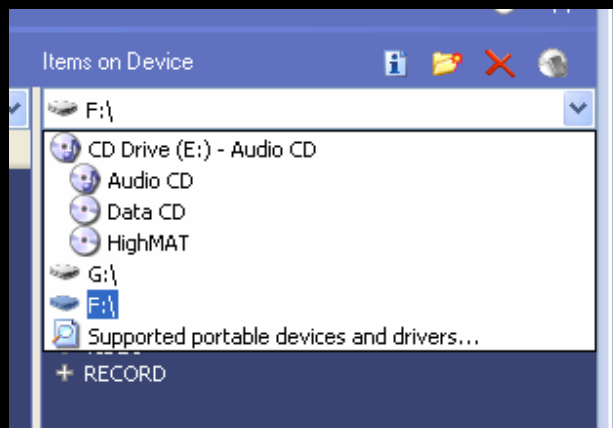

7. Then click the <Playlists> button, choose copy to "CD or device", the DEVICE means removable disks or other storage devices.

8. After you click the <Copy to CD or Device button>, the windows media player turns to the new interface as below:

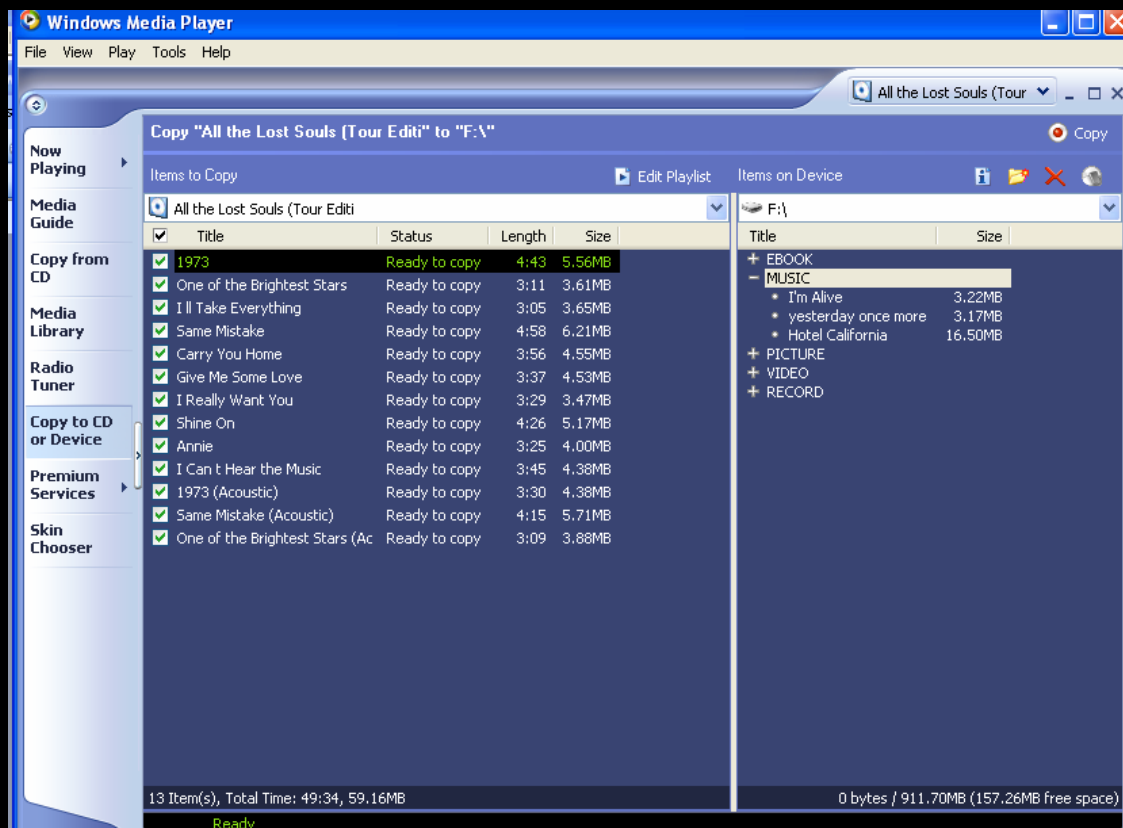

9. On the right hand side , you can see <Items on Device> this column

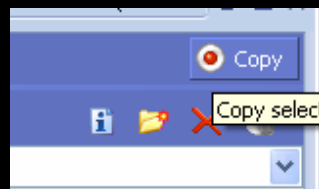

10. Choose the correct <Removable disk> (indicate the MP4 internal memory), once you select it , it will display the MP4 inside information such as the songs or videos inside

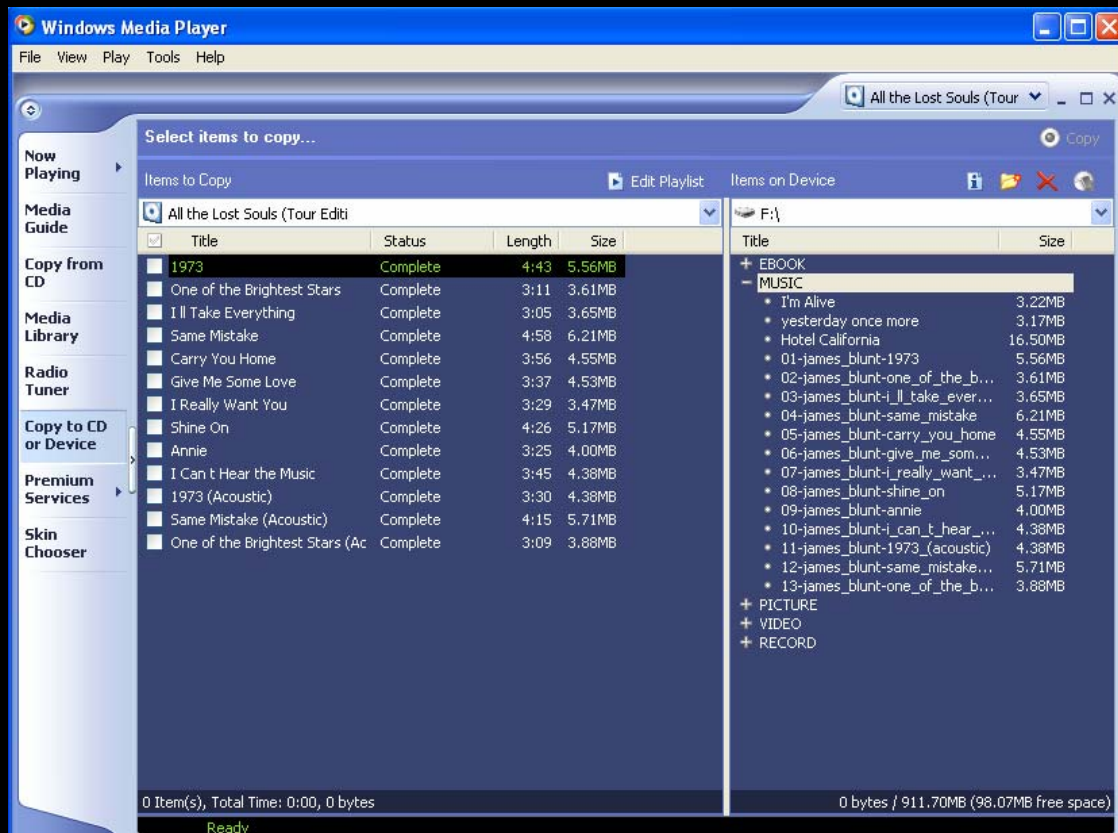

11. Tick the songs or videos you like to transfer to the MP4 player

12. Then press the <Copy> icon to transfer them into your MP4 player

13. Once you press the **<Copy>** button, it starts to transfer your music or videos to your MP4 player internal memory. After complete, you can see that your MP3 songs or videos are transferred to your MP4 player, and you are ready to enjoy
